Index		58

Chapter 1

Namespace Index

1.1 Packages

Here are the packages with brief descriptions (if available):

AxonDelay	9
ChannelConductance	9
Compartment	9
Configuration	10
MotorUnit	10
MotorUnitPool	11
NeuralTract	12
NeuralTractUnit	12
PointProcessGenerator	13
PulseConductanceState	13
simulation	13
Synapse	14
SynapsesFactory	16

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

object

AxonDelay.AxonDelay	17
ChannelConductance.ChannelConductance	19
Compartment.Compartment	21
Configuration.Configuration	24
MotorUnit.MotorUnit	26
MotorUnitPool.MotorUnitPool	33
NeuralTract.NeuralTract	37
NeuralTractUnit.NeuralTractUnit	38
PointProcessGenerator.PointProcessGenerator	40
PulseConductanceState.PulseConductanceState	41
Synapse.Synapse	44
SynapsesFactory.SynapsesFactory	51

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

AxonDelay.AxonDelay	
Class that implements a delay correspondent to the nerve	17
ChannelConductance.ChannelConductance	
Class that implements a model of the ionic Channels in a compartment	19
Compartment.Compartment	
Classdocs	21
Configuration.Configuration	
Class that builds an object of Configuration , based on a configuration file	24
MotorUnit.MotorUnit	
Class that implements a motor unit model	26
MotorUnitPool.MotorUnitPool	
Classdocs	33
NeuralTract.NeuralTract	
Classdocs	37
NeuralTractUnit.NeuralTractUnit	
Classdocs	38
PointProcessGenerator.PointProcessGenerator	
Classdocs	40
PulseConductanceState.PulseConductanceState	
Classdocs	41
Synapse.Synapse	
Classdocs	44
SynapsesFactory.SynapsesFactory	
Classdocs	51

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

AxonDelay.py	53
ChannelConductance.py	53
Compartment.py	53
Configuration.py	54
MotorUnit.py	54
MotorUnitPool.py	54
NeuralTract.py	55
NeuralTractUnit.py	55
PointProcessGenerator.py	55
PulseConductanceState.py	55
simulation.py	56
Synapse.py	56
SynapsesFactory.py	56

Chapter 5

Namespace Documentation

5.1 AxonDelay Namespace Reference

Classes

- class [AxonDelay](#)
Class that implements a delay correspondent to the nerve.

5.2 ChannelConductance Namespace Reference

Classes

- class [ChannelConductance](#)
Class that implements a model of the ionic Channels in a compartment.

5.3 Compartment Namespace Reference

Classes

- class [Compartment](#)
classdocs

Functions

- def [calcGLeak](#)
computes the leak conductance of the compartment input: area: area of the compartment in cm2 specificRes: specific resistance of the compartment in Ohm.cm2 output: gLeak in MS

5.3.1 Function Documentation

5.3.1.1 def Compartment.calcGLeak (area, specificRes)

computes the leak conductance of the compartment input: area: area of the compartment in cm2 specificRes: specific resistance of the compartment in Ohm.cm2 output: gLeak in MS

Definition at line 18 of file Compartment.py.

5.4 Configuration Namespace Reference

Classes

- class [Configuration](#)

Class that builds an object of [Configuration](#), based on a configuration file.

5.5 MotorUnit Namespace Reference

Classes

- class [MotorUnit](#)

Class that implements a motor unit model.

Functions

- def [calcGCoupling](#)

Calculates the coupling conductance between two compartments.

- def [compGCouplingMatrix](#)

Computes the Coupling Matrix to be used in the dVdt function of the N compartments of the motor unit.

- def [runge_kutta](#)

Function to implement the fourth order Runge-Kutta Method to solve numerically a differential equation.

5.5.1 Function Documentation

5.5.1.1 `def MotorUnit.calcGCoupling (cytR, IComp1, IComp2, dComp1, dComp2)`

Calculates the coupling conductance between two compartments.

- Inputs:
 - **cytR**: Cytoplasmatic resistance in Ω .cm.
 - **IComp1, IComp2**: length of the compartments in μ m.
 - **dComp1, dComp2**: diameter of the compartments in μ m.
- Output:
 - coupling conductance in MS

Definition at line 34 of file MotorUnit.py.

5.5.1.2 `def MotorUnit.compGCouplingMatrix (gc)`

Computes the Coupling Matrix to be used in the dVdt function of the N compartments of the motor unit.

The Matrix uses the values obtained with the function `calcGCoupling`.

$$GC = \begin{bmatrix} -g_c[0] & g_c[0] & 0 & \dots & \dots & 0 & 0 & 0 \\ g_c[0] & -g_c[0] - g_c[1] & g_c[1] & 0 & \dots & \dots & 0 & 0 \\ \vdots & & \ddots & & & & 0 & 0 \\ 0 & \dots & g_c[i-1] & -g_c[i-1] - g_c[i] & g_c[i] & 0 & \dots & 0 \\ 0 & 0 & 0 & \dots & \dots & & & \\ 0 & & \dots & & g_c[N-2] & -g_c[N-2] - g_c[N-1] & g_c[N-1] & \\ 0 & \dots & 0 & & & 0 & g_c[N-1] & -g_c[N-1] \end{bmatrix} \quad (5.1)$$

- Inputs:
 - **gc**: the vector with N elements, with the coupling conductance of each compartment of the Motor Unit.
- Output:
 - the GC matrix

Definition at line 65 of file MotorUnit.py.

5.5.1.3 `def MotorUnit.runge_kutta (derivativeFunction, t, x, timeStep, timeStepByTwo, timeStepBySix)`

Function to implement the fourth order Runge-Kutta Method to solve numerically a differential equation.

- Inputs:
 - **derivativeFunction**: function that corresponds to the derivative of the differential equation.
 - **t**: current instant.
 - **x**: current state value.
 - **timeStep**: time step of the solution of the differential equation, in the same unit of t.
 - **timeStepByTwo**: timeStep divided by two, for computational efficiency.
 - **timeStepBySix**: timeStep divided by six, for computational efficiency.

Definition at line 98 of file MotorUnit.py.

Here is the caller graph for this function:

5.6 MotorUnitPool Namespace Reference

Classes

- class [MotorUnitPool](#)
classdocs

Functions

- def [twitchSaturation](#)
- def [computeForce](#)

5.6.1 Function Documentation

5.6.1.1 def MotorUnitPool.computeForce (force, TwAmp, TwTet)

Definition at line 19 of file MotorUnitPool.py.

Here is the caller graph for this function:

5.6.1.2 def MotorUnitPool.twitchSaturation (force, b)

Definition at line 15 of file MotorUnitPool.py.

Here is the caller graph for this function:

5.7 NeuralTract Namespace Reference

Classes

- class [NeuralTract](#)
classdocs

5.8 NeuralTractUnit Namespace Reference

Classes

- class [NeuralTractUnit](#)
classdocs

5.9 PointProcessGenerator Namespace Reference

Classes

- class [PointProcessGenerator](#)
classdocs

Functions

- def [gammaPoint](#)

5.9.1 Function Documentation

5.9.1.1 def PointProcessGenerator.gammaPoint (*GammaOrder*)

Definition at line 15 of file PointProcessGenerator.py.

5.10 PulseConductanceState Namespace Reference

Classes

- class [PulseConductanceState](#)

Functions

- def [compValOn](#)
- def [compValOff](#)

5.10.1 Function Documentation

5.10.1.1 def PulseConductanceState.compValOff (*v0, alpha, beta, t, t0*)

Definition at line 20 of file PulseConductanceState.py.

5.10.1.2 def PulseConductanceState.compValOn (*v0, alpha, beta, t, t0*)

Definition at line 15 of file PulseConductanceState.py.

5.11 simulation Namespace Reference

Functions

- def [simulador](#)

5.11.1 Function Documentation

5.11.1.1 def simulation.simulador ()

Definition at line 21 of file simulation.py.

5.12 Synapse Namespace Reference

Classes

- class [Synapse](#)
classdocs

Functions

- def [compSynapCond](#)
- def [compRon](#)
- def [compRoff](#)
- def [compRiStart](#)
- def [compRiStop](#)
- def [compRonStart](#)
- def [compRoffStart](#)
- def [compRonStop](#)
- def [compRoffStop](#)

5.12.1 Function Documentation

5.12.1.1 `def Synapse.compRiStart (ri, t, ti, tPeak, tauOff)`

Definition at line 28 of file Synapse.py.

Here is the caller graph for this function:

5.12.1.2 `def Synapse.compRiStop (rlnf, ri, expFinish)`

Definition at line 32 of file Synapse.py.

Here is the caller graph for this function:

5.12.1.3 `def Synapse.compRoff (roff, t0, t, tauOff)`

Definition at line 24 of file Synapse.py.

Here is the caller graph for this function:

5.12.1.4 `def Synapse.compRoffStart (Roff, ri, synContrib)`

Definition at line 39 of file Synapse.py.

Here is the caller graph for this function:

5.12.1.5 `def Synapse.compRoffStop (Roff, ri, synContrib)`

Definition at line 47 of file Synapse.py.

Here is the caller graph for this function:

5.12.1.6 `def Synapse.compRon (Non, rInf, ron, t0, t, tauOn)`

Definition at line 20 of file Synapse.py.

Here is the caller graph for this function:

Class Documentation

6.1 AxonDelay.AxonDelay Class Reference

Class that implements a delay correspondent to the nerve.

Public Member Functions

- `def __init__`
Constructor.
- `def addTerminalSpike`
- `def addSpinalSpike`

Public Attributes

- `index`
- `length_m`
- `velocity_m_s`
- `stimulusPositiontoTerminal`
- `latencyStimulusSpinal_ms`
- `latencySpinalTerminal_ms`
- `latencyStimulusTerminal_ms`
- `terminalSpikeTrain`

6.1.1 Detailed Description

Class that implements a delay correspondent to the nerve.

This class corresponds to the part of the axon that is modeled with no dynamics.

Definition at line 15 of file AxonDelay.py.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 `def AxonDelay.AxonDelay.__init__(self, conf, nerve, pool, index)`

Constructor.

Inputs:

- `conf`

Definition at line 26 of file AxonDelay.py.

6.1.3 Member Function Documentation

6.1.3.1 `def AxonDelay.AxonDelay.addSpinalSpike (self, t)`

Definition at line 45 of file AxonDelay.py.

Here is the call graph for this function:

6.1.3.2 `def AxonDelay.AxonDelay.addTerminalSpike (self, t)`

Definition at line 41 of file AxonDelay.py.

Here is the caller graph for this function:

6.1.4 Member Data Documentation

6.1.4.1 `AxonDelay.AxonDelay.index`

Definition at line 27 of file AxonDelay.py.

6.1.4.2 `AxonDelay.AxonDelay.latencySpinalTerminal_ms`

Definition at line 34 of file AxonDelay.py.

6.1.4.3 `AxonDelay.AxonDelay.latencyStimulusSpinal_ms`

Definition at line 33 of file AxonDelay.py.

6.1.4.4 `AxonDelay.AxonDelay.latencyStimulusTerminal_ms`

Definition at line 35 of file AxonDelay.py.

6.1.4.5 AxonDelay.AxonDelay.length_m

Definition at line 29 of file AxonDelay.py.

6.1.4.6 AxonDelay.AxonDelay.stimulusPositiontoTerminal

Definition at line 31 of file AxonDelay.py.

6.1.4.7 AxonDelay.AxonDelay.terminalSpikeTrain

Definition at line 38 of file AxonDelay.py.

6.1.4.8 AxonDelay.AxonDelay.velocity_m_s

Definition at line 30 of file AxonDelay.py.

The documentation for this class was generated from the following file:

- [AxonDelay.py](#)

6.2 ChannelConductance.ChannelConductance Class Reference

Class that implements a model of the ionic Channels in a compartment.

Public Member Functions

- def [__init__](#)
Builds an ionic channel conductance.
- def [computeCurrent](#)
Computes the current genrated by the ionic Channel.
- def [compCondKf](#)
Computes the conductance of a Kf Channel.
- def [compCondKs](#)
Computes the conductance of a Ks Channel.
- def [compCondNa](#)
Computes the conductance of a Na Channel.

Public Attributes

- [kind](#)
- [condState](#)
- [EqPot_mV](#)
- [gmax_muS](#)
- [stateType](#)
- [compCond](#)
- [lenStates](#)

6.2.1 Detailed Description

Class that implements a model of the ionic Channels in a compartment.

Definition at line 16 of file ChannelConductance.py.

6.2.2 Constructor & Destructor Documentation

6.2.2.1 `def ChannelConductance.ChannelConductance.__init__(self, kind, conf, compArea, pool, index)`

Builds an ionic channel conductance.

Inputs: kind - string with the type of the ionic channel (Na, Ks, Kf or Ca) conf - instance of the [Configuration](#) class (see [Configuration](#) file) compArea - float with the area of the compartment that the Channel belongs, in cm2 pool - the pool that this state belongs. index - the index of the unit that this state belongs.

Definition at line 30 of file ChannelConductance.py.

6.2.3 Member Function Documentation

6.2.3.1 `def ChannelConductance.ChannelConductance.compCondKf(self, V_mV)`

Computes the conductance of a Kf Channel.

This function is assigned as self.compCond to a Kf Channel at the class constructor.

Input:
V_mV - membrane potential of the compartment in mV

Output:
Conductance in muS

Definition at line 90 of file ChannelConductance.py.

6.2.3.2 `def ChannelConductance.ChannelConductance.compCondKs(self, V_mV)`

Computes the conductance of a Ks Channel.

This function is assigned as self.compCond to a Ks Channel at the class constructor.

Input:
V_mV - membrane potential of the compartment in mV

Output:
Conductance in muS

Definition at line 104 of file ChannelConductance.py.

6.2.3.3 `def ChannelConductance.ChannelConductance.compCondNa(self, V_mV)`

Computes the conductance of a Na Channel.

This function is assigned as self.compCond to a Na Channel at the class constructor.

Input:
V_mV - membrane potential of the compartment in mV

Output:
Conductance in muS

Definition at line 118 of file ChannelConductance.py.

6.2.3.4 `def ChannelConductance.ChannelConductance.computeCurrent(self, t, V_mV)`

Computes the current generated by the ionic Channel.

Inputs: t - instant in ms V_mV - membrane potential of the compartment in mV

Outputs: Ionic current in nA

Definition at line 75 of file ChannelConductance.py.

6.2.4 Member Data Documentation

6.2.4.1 ChannelConductance.ChannelConductance.compCond

Definition at line 44 of file ChannelConductance.py.

6.2.4.2 ChannelConductance.ChannelConductance.condState

Definition at line 32 of file ChannelConductance.py.

6.2.4.3 ChannelConductance.ChannelConductance.EqPot_mV

Definition at line 34 of file ChannelConductance.py.

6.2.4.4 ChannelConductance.ChannelConductance.gmax_muS

Definition at line 35 of file ChannelConductance.py.

6.2.4.5 ChannelConductance.ChannelConductance.kind

Definition at line 31 of file ChannelConductance.py.

6.2.4.6 ChannelConductance.ChannelConductance.lenStates

Definition at line 58 of file ChannelConductance.py.

6.2.4.7 ChannelConductance.ChannelConductance.stateType

Definition at line 37 of file ChannelConductance.py.

The documentation for this class was generated from the following file:

Definition at line 38 of file Compartment.py.

6.3.4.14 Compartment.Compartment.SynapsesOut

Definition at line 36 of file Compartment.py.

The documentation for this class was generated from the following file:

- [Compartment.py](#)

6.4 Configuration.Configuration Class Reference

Class that builds an object of [Configuration](#), based on a configuration file.

Public Member Functions

- `def __init__`
Constructor.
- `def parameterSet`
Function that returns the value of wished parameter specified in the paramTag variable.
- `def inputFunctionGet`
Returns a numpy array with the values of the function for the whole simulation.
- `def determineSynapses`
Function used to determine all the synapses that a given pool makes.

Public Attributes

- `confArray`
An array with all the simulation parameters.
- `timeStep_ms`
Time step of the numerical solution of the differential equation.
- `simDuration_ms`
Total length of the simulation in ms.
- `timeStepByTwo_ms`
The variable timeStep divided by two, for computaional efficiency.
- `timeStepBySix_ms`
The variable timeStep divided by six, for computaional efficiency.

6.4.1 Detailed Description

Class that builds an object of [Configuration](#), based on a configuration file.

Definition at line 13 of file Configuration.py.

6.4.2 Constructor & Destructor Documentation

6.4.2.1 `def Configuration.Configuration.__init__(self, filename)`

Constructor.

Builds the [Configuration](#) object.

```
Inputs:
    - filename: name of the file with the paremeter values. The extension of the file should be .rmt0

    The variables timeStep and simDuration that are used in the whole system are set at the constructor
    of the Configuration class.
```

Definition at line 31 of file Configuration.py.

6.4.3 Member Function Documentation

6.4.3.1 `def Configuration.Configuration.determineSynapses (self, neuralSource)`

Function used to determine all the synapses that a given pool makes.

It is used in the [SynapsesFactory](#) class.

Inputs:

`neuralSource` - string with the pool name from which is desired to know what synapses it will make.

Outputs:

- array of strings with all the synapses target that the `neuralSource` will make.

Definition at line 137 of file `Configuration.py`.

6.4.3.2 `def Configuration.Configuration.inputFunctionGet (self, function)`

Returns a numpy array with the values of the function for the whole simulation.

It is used to obtain before the simulation run all the values of the inputs.

Inputs:

`function` - function from which is desired to obtain its values during the simulation duration.

Output:

- `ndarray` with the function values for each instant.

Definition at line 119 of file `Configuration.py`.

6.4.3.3 `def Configuration.Configuration.parameterSet (self, paramTag, pool, index)`

Function that returns the value of wished parameter specified in the `paramTag` variable.

In the case of min/max parameters, the value returned is the specific to the index of the unit that called the function.

Inputs:

`paramTag` - string with the name of the wished parameter as in the first column of the `rmto` file.

`pool` - pool from which the unit that will receive the parameter value belongs. For example `SOL`. It is used only in the parameters that have a range.

`index` - index of the unit. It is an integer.

Outputs:

- required parameter value

Definition at line 72 of file `Configuration.py`.

6.4.4 Member Data Documentation

6.4.4.1 `Configuration.Configuration.confArray`

An array with all the simulation parameters.

Definition at line 34 of file `Configuration.py`.

6.4.4.2 Configuration.Configuration.simDuration_ms

Total length of the simulation in ms.

Definition at line 44 of file Configuration.py.

6.4.4.3 Configuration.Configuration.timeStep_ms

Time step of the numerical solution of the differential equation.

Definition at line 41 of file Configuration.py.

6.4.4.4 Configuration.Configuration.timeStepBySix_ms

The variable timeStep divided by six, for computaional efficiency.

Definition at line 48 of file Configuration.py.

6.4.4.5 Configuration.Configuration.timeStepByTwo_ms

The variable timeStep divided by two, for computaional efficiency.

Definition at line 46 of file Configuration.py.

The documentation for this class was generated from the following file:

- [Configuration.py](#)

6.5 MotorUnit.MotorUnit Class Reference

Class that implements a motor unit model.

Public Member Functions

- [def __init__](#)
Constructor.
- [def atualizeMotorUnit](#)
Atualize the dynamical and nondynamical (delay) parts of the motor unit.
- [def atualizeCompartments](#)
Atualize all neural compartments.
- [def dVdt](#)
Compute the potential derivative of all compartments of the motor unit.
- [def addSomaSpike](#)
When the soma potential is above the threshold a spike is added tom the soma.
- [def atualizeDelay](#)
Atualize the terminal spike train, by considering the Delay of the nerve.

Public Attributes

- [conf](#)
Configuration object with the simulation parameters.
- [kind](#)
String with the type of the motor unit.

- [tSomaSpike](#)
The instant of the last spie of the Motor unit at the Soma compartment.
- [somaSpikeTrain](#)
Vector with the instants of spikes at the soma.
- [index](#)
Integer corresponding to the motor unit order in the pool, according to the Henneman's principle (size principle).
- [compartment](#)
Vector of [Compartment](#) of the Motor Unit.
- [threshold_mV](#)
Value of the membrane potential, in mV, that is considered a spike.
- [compNumber](#)
Number of compartments.
- [v_mV](#)
Vector with membrane potential,in mV, of all compartments.
- [capacitanceInv](#)
Vector with the inverse of the capacitanece of all compartments.
- [ilonic](#)
Vector with current, i nA, of each compartment coming from other elements of the model.
- [iInjected](#)
Vector with the current, in nA, injected in each compartment.
- [G](#)
Matrix of the conductance of the motoneuron.
- [somaIndex](#)
index of the soma compartment.
- [MNRefPer_ms](#)
Refractory period, in ms, of the motoneuron.
- [nerve](#)
String with type of the nerve.
- [Delay](#)
[AxonDelay](#) object of the motor unit.
- [terminalSpikeTrain](#)
Vector with the instants of spikes at the terminal.
- [TwitchTc_ms](#)
Contraction time of the twitch muscle unit, in ms.
- [TwitchAmp_N](#)
Amplutude of the muscle unit twitch, in N.
- [bSat](#)
Parameter of the saturation.
- [twTet](#)
Twitch- tetanus relationship.

6.5.1 Detailed Description

Class that implements a motor unit model.

Encompasses a motoneuron and a muscle unit.

Definition at line 112 of file MotorUnit.py.

6.5.2 Constructor & Destructor Documentation

6.5.2.1 `def MotorUnit.MotorUnit.__init__(self, conf, pool, index, kind)`

Constructor.

- Inputs:
 - **conf**: [Configuration](#) object with the simulation parameters.
 - **pool**: string with Motor unit pool to which the motor unit belongs.
 - **index**: integer corresponding to the motor unit order in the pool, according to the Henneman's principle (size principle).
 - **kind**: string with the type of the motor unit. It can be S (slow), FR (fast and resistant), and FF (fast and fatigable).

Definition at line 130 of file MotorUnit.py.

6.5.3 Member Function Documentation

6.5.3.1 `def MotorUnit.MotorUnit.addSomaSpike(self, t)`

When the soma potential is above the threshold a spike is added tom the soma.

- Inputs:
 - **t**: current instant, in ms.

Definition at line 281 of file MotorUnit.py.

Here is the caller graph for this function:

6.5.3.2 `def MotorUnit.MotorUnit.atualizeCompartments(self, t)`

Atualize all neural compartments.

- Inputs:
 - **t**: current instant, in ms.

Definition at line 251 of file MotorUnit.py.

Here is the call graph for this function:

Here is the caller graph for this function:

6.5.3.3 `def MotorUnit.MotorUnit.atualizeDelay (self, t)`

Atualize the terminal spike train, by considering the Delay of the nerve.

- Inputs:
 - `t`: current instant, in ms.

Definition at line 297 of file `MotorUnit.py`.

Here is the caller graph for this function:

6.5.3.4 `def MotorUnit.MotorUnit.atualizeMotorUnit (self, t)`

Atualize the dynamical and nondynamical (delay) parts of the motor unit.

- Inputs:
 - **t**: current instant, in ms.

Definition at line 239 of file MotorUnit.py.

Here is the call graph for this function:

6.5.3.5 def MotorUnit.MotorUnit.dVdt (self, t, V)

Compute the potential derivative of all compartments of the motor unit.

- Inputs:
 - **t**: current instant, in ms.
 - **V**: Vector with the current potential value of all neural compartments of the motor unit.

Definition at line 266 of file MotorUnit.py.

Here is the caller graph for this function:

6.5.4 Member Data Documentation

6.5.4.1 MotorUnit.MotorUnit.bSat

Parameter of the saturation.

Definition at line 224 of file MotorUnit.py.

6.5.4.2 MotorUnit.MotorUnit.capacitanceInv

Vector with the inverse of the capacitance of all compartments.

Definition at line 176 of file MotorUnit.py.

6.5.4.3 MotorUnit.MotorUnit.compartment

Vector of [Compartment](#) of the Motor Unit.

Definition at line 147 of file MotorUnit.py.

6.5.4.4 MotorUnit.MotorUnit.compNumber

Number of compartments.

Definition at line 154 of file MotorUnit.py.

6.5.4.5 MotorUnit.MotorUnit.conf

[Configuration](#) object with the simulation parameters.

Definition at line 133 of file MotorUnit.py.

6.5.4.6 MotorUnit.MotorUnit.Delay

[AxonDelay](#) object of the motor unit.

Definition at line 209 of file MotorUnit.py.

6.5.4.7 MotorUnit.MotorUnit.G

Matrix of the conductance of the motoneuron.

Multiplied by the vector `self.v_mV`, results in the passive currents of each compartment.

Definition at line 191 of file MotorUnit.py.

6.5.4.8 MotorUnit.MotorUnit.ilnjected

Vector with the current, in nA, injected in each compartment.

Definition at line 182 of file MotorUnit.py.

6.5.4.9 MotorUnit.MotorUnit.ilonic

Vector with current, i nA, of each compartment coming from other elements of the model.

For example from ionic channels and synapses.

Definition at line 180 of file MotorUnit.py.

6.5.4.10 MotorUnit.MotorUnit.index

Integer corresponding to the motor unit order in the pool, according to the Henneman's principle (size principle).

Definition at line 145 of file MotorUnit.py.

6.5.4.11 MotorUnit.MotorUnit.kind

String with the type of the motor unit.

It can be S (slow), FR (fast and resistant) and FF (fast and fatigable).

Definition at line 136 of file MotorUnit.py.

6.5.4.12 `MotorUnit.MotorUnit.MNRefPer_ms`

Refractory period, in ms, of the motoneuron.

Definition at line 198 of file `MotorUnit.py`.

6.5.4.13 `MotorUnit.MotorUnit.nerve`

String with type of the nerve.

It can be PTN (posterior tibial nerve) or CPN (common peroneal nerve).

Definition at line 204 of file `MotorUnit.py`.

6.5.4.14 `MotorUnit.MotorUnit.somaIndex`

index of the soma compartment.

Definition at line 195 of file `MotorUnit.py`.

6.5.4.15 `MotorUnit.MotorUnit.somaSpikeTrain`

Vector with the instants of spikes at the soma.

Definition at line 143 of file `MotorUnit.py`.

6.5.4.16 `MotorUnit.MotorUnit.terminalSpikeTrain`

Vector with the instants of spikes at the terminal.

Definition at line 213 of file `MotorUnit.py`.

6.5.4.17 `MotorUnit.MotorUnit.threshold_mV`

Value of the membrane potential, in mV, that is considered a spike.

Definition at line 149 of file `MotorUnit.py`.

6.5.4.18 `MotorUnit.MotorUnit.tSomaSpike`

The instant of the last spie of the Motor unit at the Soma compartment.

Definition at line 140 of file `MotorUnit.py`.

6.5.4.19 `MotorUnit.MotorUnit.TwitchAmp_N`

Amplitude of the muscle unit twich, in N.

Definition at line 222 of file `MotorUnit.py`.

6.5.4.20 `MotorUnit.MotorUnit.TwitchTc_ms`

Contraction time of the twich muscle unit, in ms.

Definition at line 220 of file `MotorUnit.py`.

6.5.4.21 MotorUnit.MotorUnit.twTet

Twitch- tetanus relationship.

Definition at line 226 of file MotorUnit.py.

6.5.4.22 MotorUnit.MotorUnit.v_mV

Vector with membrane potential,in mV, of all compartments.

Definition at line 156 of file MotorUnit.py.

6.10 PulseConductanceState.PulseConductanceState Class Reference

Public Member Functions

- `def __init__`
Initializes the pulse conductance state.
- `def changeState`

void function that modify the current situation (true/false) of the state

- `def computeStateValue`

compute the state value by using the approximation of Destexhe (1997) to compute the Hodgkin-Huxley states.

Public Attributes

- `kind`
- `value`
- `v0`
- `t0`
- `state`
- `beta_ms1`
- `alpha_ms1`
- `PulseDur_ms`
- `actType`
- `computeValueOn`
- `computeValueOff`

6.10.1 Detailed Description

Definition at line 24 of file PulseConductanceState.py.

6.10.2 Constructor & Destructor Documentation

6.10.2.1 `def PulseConductanceState.PulseConductanceState.__init__(self, kind, conf, pool, index)`

Initializes the pulse conductance state.

Variables: `kind` - type of the state(m, h, n, q). `conf` - an instance of the [Configuration](#) class with the functions to correctly parameterize the model. See the [Configuration](#) class. `pool` - the pool that this state belongs. `index` - the index of the unit that this state belongs.

Definition at line 38 of file PulseConductanceState.py.

6.10.3 Member Function Documentation

6.10.3.1 `def PulseConductanceState.PulseConductanceState.changeState (self, t)`

void function that modify the current situation (true/false) of the state

Inputs: `t` - instant `t`

Definition at line 76 of file PulseConductanceState.py.

Here is the caller graph for this function:

6.10.3.2 `def PulseConductanceState.PulseConductanceState.computeStateValue (self, t)`

compute the state value by using the approximation of Destexhe (1997) to compute the Hodgkin-Huxley states.

Input: t - instant t

Definition at line 87 of file PulseConductanceState.py.

Here is the call graph for this function:

6.10.4 Member Data Documentation

6.10.4.1 `PulseConductanceState.PulseConductanceState.actType`

Definition at line 53 of file PulseConductanceState.py.

6.10.4.2 `PulseConductanceState.PulseConductanceState.alpha_ms1`

Definition at line 49 of file PulseConductanceState.py.

7.3 Compartment.py File Reference

Classes

- class [Compartment.Compartment](#)
classdocs

Namespaces

- [Compartment](#)

Functions

- def [Compartment.calcGLeak](#)

computes the leak conductance of the compartment input: area: area of the compartment in cm2 specificRes: specific resistance of the compartment in Ohm.cm2 output: gLeak in MS

7.4 Configuration.py File Reference

Classes

- class [Configuration.Configuration](#)

Class that builds an object of [Configuration](#), based on a configuration file.

Namespaces

- [Configuration](#)

7.5 MotorUnit.py File Reference

Classes

- class [MotorUnit.MotorUnit](#)

Class that implements a motor unit model.

Namespaces

- [MotorUnit](#)

Functions

- def [MotorUnit.calcGCoupling](#)

Calculates the coupling conductance between two compartments.

- def [MotorUnit.compGCouplingMatrix](#)

Computes the Coupling Matrix to be used in the dVdt function of the N compartments of the motor unit.

- def [MotorUnit.runge_kutta](#)

Function to implement the fourth order Runge-Kutta Method to solve numerically a differential equation.
